Pain reduction and elimination: Natural brain augmentation using NGUI-MATRIX

Stanley Ngui-Hon Sang

Universities of Humanitarian Medicine Federation, Canada

Statement of Problem: Pain is the most common symptom of most illnesses/injuries. Many people sustain complex pains for many years with no relief.

Hypothesis: Using three models to treat pain, conventional medicine uses the understanding of the nervous system, and modern Chinese medicine uses the understanding of the meridian system. The third system uses the understanding of the path of least resistance. Since Qi flows or migrates in the body, an electrical system was used. Having two parallel resistors in a low voltage circuit with one resistor slightly larger than the other, the current would flow more in the circuit with lesser resistance. When one of the resistance is very much larger than the other, the circuit with the larger resistance becomes an open circuit i.e. no current flows through that circuit. Depending on the variance of the pain, the corrective Qi/energy would find the path of least resistance.

Objective: To use a non-invasive method to reduce/eliminate pain in any part of the body, by targeting the brain using specific points on the head.

Methods: Experimental Procedure 1: The administer applies pressure on a point on the head of the subject to remove pain from a distal part of the body of that subject. This is done by randomly using different points until the right point is used, and then, the pain would reduce instantly.

Experimental Procedure 2: A continuity monitor was used with the negative probe on the site of injury, and the positive probe was close to the specific point on the head of the subject. The positive probe was moved around within an area called the module until the specific point to the injury was reached. The pain would reduce instantly.

Conclusion: This kind of treatment requires knowledge of the landscape of the head, and precision with two millimeters tolerance.

Biography

Stanley Ngui Hon Sang PhD, IMD, Co-chair to the 19th World Congress on Qigong/Traditional Chinese Medicine/Natural Healing founder of NGUI-MATRIX. He is the professor at large for Universities of Humanitarian Medicine Federation (WONM-UNIVFED), Qi Gong Grandmaster, past principal of the Academy of Acupuncture, and have 40 years of clinical experience. He has served as co-chair and a speaker for the World Congresses on Qigong/Traditional Chinese Medicine, and practicing clinician. He is the president of Beyond Abilities center (a charity organization), and the advisor/elder facilitator to the indigenous people (Anishnabe Nation, Eagle Clan). He has lectured and taught classes at various venues and universities both locally and internationally. He appeared in videos and national television. Some accolades are Knight of the Sovereign Orthodox Order of the Knights Hospitaller of St. John, Medical Qi Master of the year, and member of the North America Martial Arts of Fame. He is pursuing the subject "Natural Brain Augmentation" and using the technique "NGUI-MATRIX". He would like to bring to the world, even the poorest country should be exposed to it.
