

4th International Conference on

ASTROPHYSICS AND PARTICLE PHYSICS

December 03-05, 2018 | Chicago, USA

Gravity and light repel each other

Iraj Khalilymoghadam
Iran

Scientists believe gravity is neutral on the light I can prove the opposite of that which absolutely new opinion is. I divide light into 2 sorts:

1. light of the mass that makes them visible “1.3”
2. light of the sun or any source in the universe “3.26”

In my opinion, any vertical thing we see is higher than the real height and it depends on gravity. Something that is 10meters long horizontally looks about 13meters vertically. Gravity has been forming and shaping mass during million years. A hundred million years ago everything was huge because gravity was big so because of this opposition earth rotation was faster, day and nights were shorter and the year was shorter. If we go back to that time with this body we will be dwarf and if we travel to million years later we'll be huge for those people and animals. In fact, gravity stretches the shape of the matter vertically. “Gravity wards off light and light pushes gravity.” A force is pushing earth so the sun is not swallowing earth and planets. This force is light. The gravity of the sun pulls earth and light pushes it so it's rotating. A black hole pushes light with its huge gravity. Earthquake is because of changing gravity. The reason of flow and ebb (tides) is the opposition of light and gravity not the gravity of the Moon. This opposition is neutral in water.

Biography

Iraj Khalilymoghadam haven't studied Physics but I've been research work in physics for about 5 years.
